THE SPRING RUSH IS REAL

Don't Wait Until Spring

Every spring, playground owners call at the same time. Waiting means waiting in line.

- **Parts take time.** Replacement components can take weeks to arrive, and discontinued or custom parts can take even longer.
- **Contractors book up.** Installers and repair crews fill their spring calendars fast. Off-season scheduling is easier.
- **Winter makes problems worse.** Freeze–thaw cycles, ice, and snow can loosen hardware, crack plastics, and displace surfacing.
- **Budgets get set early.** A written report now gives you real numbers for next year's maintenance budget.

THE TIMING DIFFERENCE

OCTOBER	APRIL
Up to 5 months to fix issues before spring opening	Repairs compete with peak play season

243,000+

playground equipment injuries treated in U.S. emergency rooms each year, on average. About 1 in 3 are fractures.

CPSI-Certified · Photo Reports · Midwest Service

THE SMART TIME TO INSPECT

Why Inspect in Fall & Winter?

1 Time to Order Parts
Find worn or broken components now and order replacements while there's time to wait for delivery.

2 Repairs Without Disruption
Play areas see lighter use in cold months, so repairs and closures affect fewer children and families.

3 Plan the Budget
A risk-ranked report helps you prioritize spending and support board, district, or council approvals.

4 Documentation on File
A dated, written inspection supports insurance, licensing, and risk-management conversations.

5 Open on Day One
Corrections are done before the first warm day — no surprise closures when kids return in spring.

WEATHER-FRIENDLY SCHEDULING

Outdoor inspections are scheduled around Midwest weather, and indoor play areas can be inspected any day of the winter.

> **"The best time to find a hazard is before a child does."**
